

LOCAH

The Business OS

How businesses are understood, brought online, operated, automated and grown in one connected system.

For product, engineering and design teams

A readable explanation of the current LOCAH vision: business categories, intelligent onboarding, Website/Marketplace, Workspace, modules, role surfaces, WhatsApp, AI employees, automations, payments, inventory, delivery, marketing, education, real estate, B2B and integrations.

September 2026 | Internal product guide

UNDERSTAND**RUN****GROW**

READ THIS FIRST

What this guide represents

This is the current product blueprint, not a claim that every capability is already live in production.

Source and freshness note

This guide consolidates the LOCAH Business Capability Universe (24 Sep 2026), the Business Interview product direction, and current founder decisions through 26 Sep 2026. The Business Capability Universe still contains some older provider references. Current payment direction is Cashfree; this guide reflects that newer decision.

LOCAH has evolved beyond the original 01-12 planning stack. This document therefore explains the current system in product language instead of reproducing the old page-by-page specification hierarchy.

The central rule is simple: one Business record, one set of operational truths, many surfaces. A Website, Marketplace listing, WhatsApp conversation, phone call, Workspace screen, POS terminal or AI employee must not create its own private copy of orders, bookings, stock or customers.

What a teammate should understand after reading this

- What LOCAH is - and why it is much more than a website builder.
- How a business owner is interviewed without being forced through a long form.
- How every type of business maps to reusable capabilities rather than a separate vertical app.
- How Workspace changes depending on the business, enabled modules, role and location.
- How WhatsApp can take orders, bookings, payments, renewals, tracking requests and promotional campaigns.
- How AI Receptionist and AI employees operate through the same permissioned business tools as people.
- How POS, inventory, delivery, Tally/billing software connectors and online presence become one ecosystem.
- How gyms, clinics, hotels, education, real estate, industrial suppliers and small retailers differ while sharing the same platform.

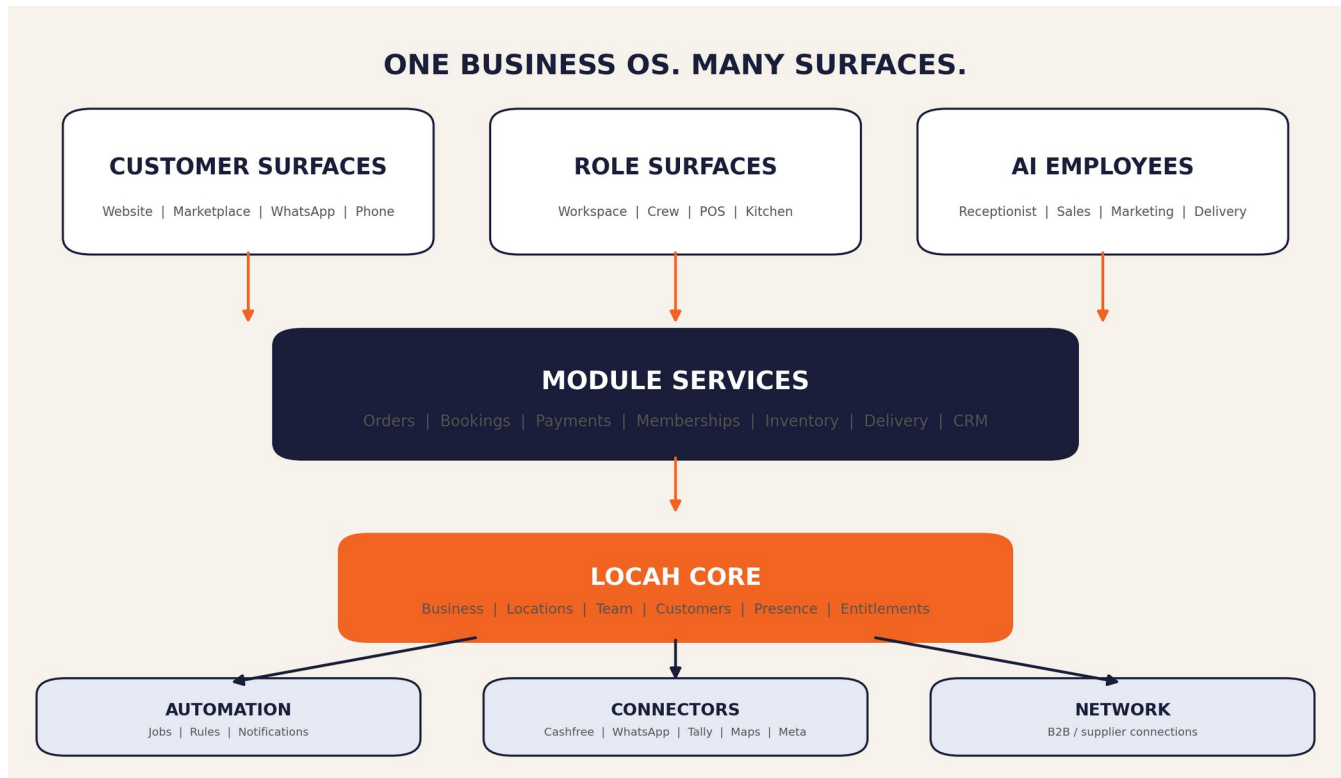

Contents

- 1-3. Core model, owner journey and Workspace
- 4-6. Modules, role workspaces, automation and AI employees
- 7-8. WhatsApp and AI Receptionist
- 9-10. Memberships, delivery and dispatch
- 11-12. POS, inventory, connectors and Cashfree payments
- 13. Reviews, marketing and Meta
- 14-16. Real estate, education and B2B/industrial
- 17. All selectable business categories
- 18. Complete sector playbooks
- 19-20. End-to-end examples, testing and build philosophy

01

LOCAH in one picture

LOCAH is designed as a connected Business Operating System, not a collection of unrelated vertical apps.

A customer can arrive from the Website, Marketplace, WhatsApp or phone. A worker can act from Workspace, Crew App, POS or Kitchen Display. An AI employee can act through approved tools. All of them use the same module services and the same Business data.

Why this matters

The restaurant does not have a separate "restaurant app", the gym does not have a separate "gym app", and the clinic does not have a separate "clinic app". They are different configurations of the same Business OS.

The four layers

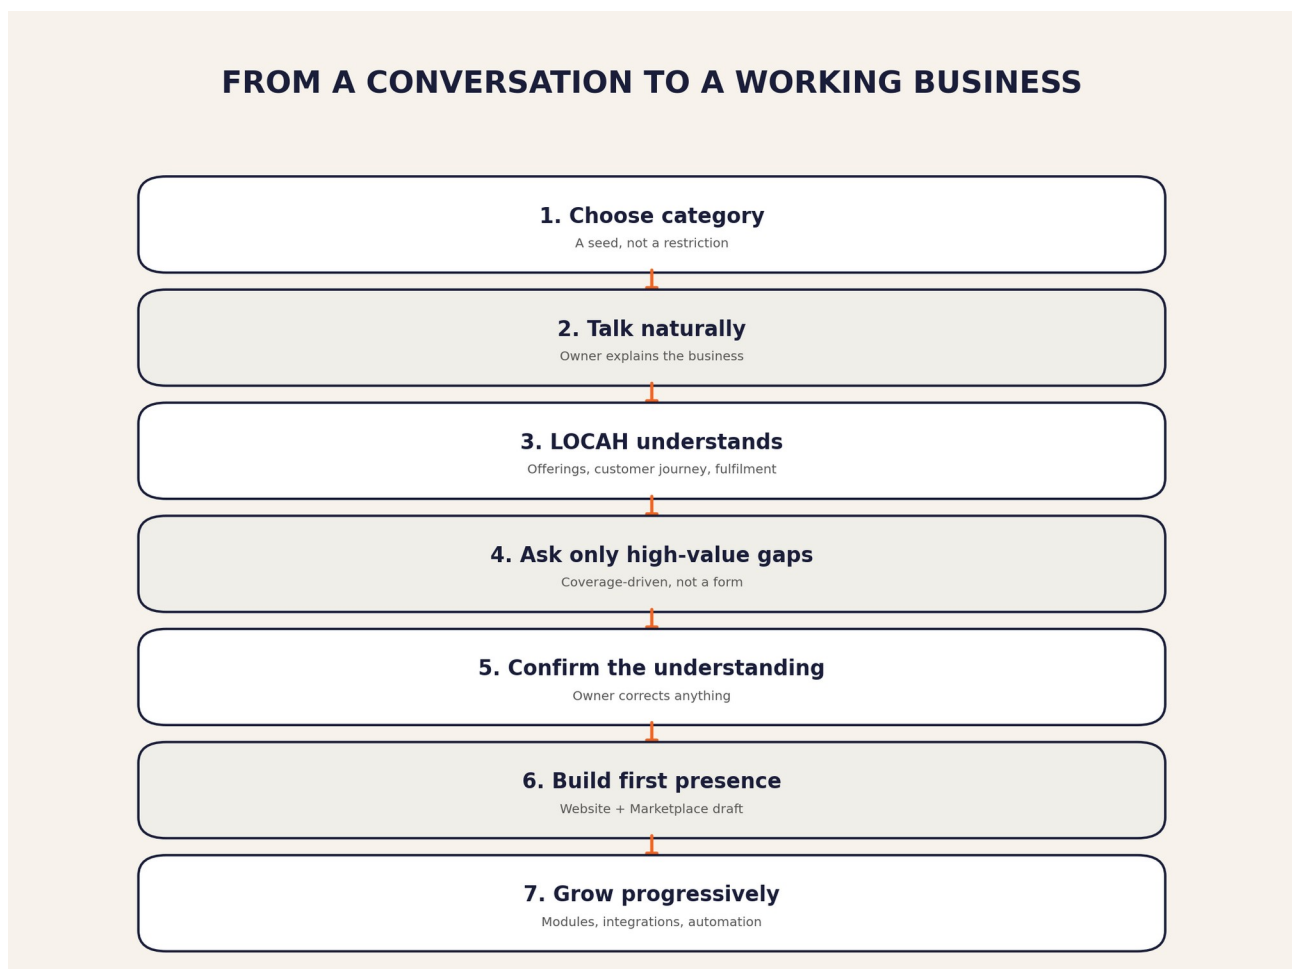

Layer	What it means	Examples
Business Core	Identity and shared business truth	Business, locations, team, customers, presence, permissions
Modules	Reusable capabilities that actually run work	Orders, bookings, inventory, payments, memberships, quotes, delivery
Surfaces	The UI suited to each person or customer	Workspace, POS, crew app, customer tracking, Website, WhatsApp

Layer	What it means	Examples
Automation + connectors	Systems that run work and connect existing tools	Reminders, Cashfree, Tally, Maps, Meta, WhatsApp

02

The owner journey: talk → understand → build → run

The interview should feel like an experienced business expert understanding the owner, not like a 20-question form.

How questions should work

LOCAH should optimize for understanding per owner effort, not for a fixed question count. A simple business may need only a few follow-ups; a complex hospital, hotel or B2B business can need more. The system should stop when the core business mechanics are sufficiently understood, not when every possible field is filled.

Dimension LOCAH should understand	Examples
What the business is	Meat shop, gym, clinic, hotel, industrial supplier
What it sells/provides	Products, services, rooms, courses, memberships, projects, properties
How customers convert	Order, book, walk in, enquire, request quote, join, call, WhatsApp
How value is delivered	Pickup, local delivery, shipping, appointment, onsite service, digital, stay
Where it operates	Location, service area, online-only, multi-location
Offering structure	Weight/cuts, menu, classes, doctors, room types, projects, technical catalogue
Primary Website goal	Buy, book, join, enquire, request quote, visit, contact

The important distinction

Do not ask a question just because a field is empty. Ask only when the answer changes the Website, customer journey, capability recommendation, factual truth or business setup in a meaningful way.

What the conversation should feel like

Owner: "We have a gym. Mostly monthly memberships, but we also do PT."

LOCAH: "Got it - memberships are the core, with personal training as the higher-touch offer. So the Website probably needs to help someone understand the gym and either join, book a trial, or speak to you. Do you also run group classes?"

This is better than asking separate novice questions such as "Do you have memberships?", "Do you provide personal training?", "Do you offer classes?" when the owner has already given most of that information.

Readiness and the build moment

- When enough core truth exists, LOCAH should say it has enough to build a strong first version.
- The Build my Website action should appear and stay available even if optional enrichment remains.
- The owner can choose Keep refining if they want to continue talking.
- Logo, every opening hour, every product, every staff member and full module setup must not become a wall before the first Website.
- The understanding panel must separate offerings, customer actions, operating facts, location, content and modules so nonsense mappings cannot appear.

Target experience

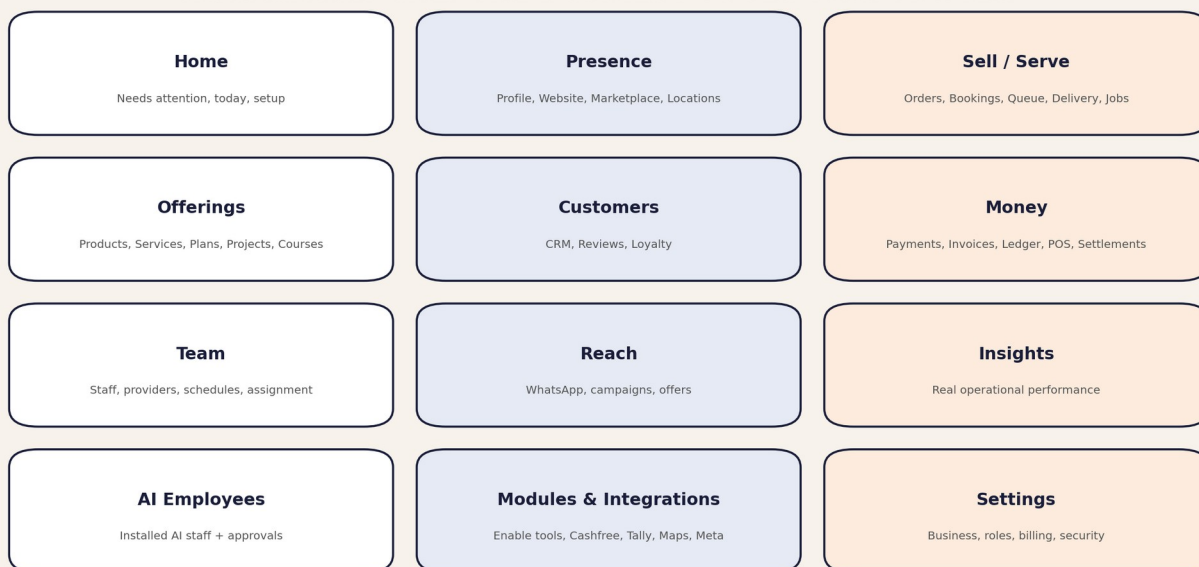

Tell LOCAH a little → LOCAH understands a lot → owner confirms → a beautiful first presence appears → the rest of the Business OS grows progressively around it.

03

Workspace: the control centre

Workspace is not a fixed admin template. It is an adaptive control centre built from the Business, enabled modules, role, scope and current activity.

WORKSPACE: ONLY THE BUSINESS TOOLS THAT MATTER

Recommended Workspace navigation model

Area	What the owner or staff sees
Home	Needs you now, today, setup status, what is late/stuck, relevant summaries
Business Presence	Profile, Website, Marketplace, locations, publish status
Sell / Serve / Operate	Orders, bookings, queue, deliveries, jobs - only what this business uses
Offerings	Products, services, plans, rooms, courses, projects or property inventory
Customers	Customer timeline, leads, reviews, loyalty, consent
Money	Payments, invoices, refunds, ledger/khata, settlements, POS summaries
Team	People, roles, providers, schedules, assignments, attendance
Reach	WhatsApp, campaigns, offers, lead sources
Insights	Real operational metrics and recommendations - no fabricated data
AI Employees	Installed AI staff, activity, approvals, pause/kill controls
Modules & Integrations	Enable/setup tools, Cashfree, Tally, Maps, Meta and other connectors
Settings	Business, locations, permissions, billing, security, provider configuration

Adaptive, not cluttered

A meat shop should not see hotel housekeeping. A solo consultant should not see kitchen screens. A delivery partner should not see owner finances. The Workspace expands only as relevant capabilities become active.

Home should answer a question, not display random cards

- Owner: What needs me now? What is happening today? What should I set up next?
- Manager: What is late, blocked or exceptional at my location?
- Reception/front desk: Who is here, who is next, and who owes?
- Provider: What is my next appointment and what does my day look like?
- Cashier: Is my shift open, what bills are pending, and does my drawer balance?
- Dispatcher: Which deliveries are unassigned or late?
- Accountant: What is unpaid, unsynced or due?

04

Capability and module universe

Business categories recommend modules, but categories never become hardcoded apps. Operating traits and owner choices decide what is useful.

Capability packs - outcome language for owners

Pack	Owner outcome	Typical capabilities
Storefront (all)	"I'm online, findable and reachable"	website, marketplace listing, customer-relationships, reviews, messaging, insights, compliance
Commerce	"People can buy from me online and at the counter"	offerings-catalog, orders, payments, inventory, fulfilment, invoicing, pos, ledger, loyalty
Food service	"Orders reach the kitchen and stock follows sales"	Commerce + table bookings, kitchen display, recipes, dine-in QR ordering, procurement
Appointments	"My calendar fills itself and no-shows drop"	offerings-catalog (services), bookings, workforce, queue, memberships (packages)
Stays & rentals	"Rooms and assets are booked, paid and turned around"	bookings (date range), payments (deposits), tasks, documents, handover checklists
Memberships	"Renewals collect themselves"	memberships, attendance, payments, bookings (classes)
Learning	"Batches, attendance and fees in one place"	academics, attendance, memberships (fee plans), documents
Sales & quotes	"No lead or quote goes cold"	leads, quotes, projects, documents, invoicing, ledger
Field service	"Technicians get jobs, customers get updates"	jobs, dispatch, inventory (van stock), memberships (AMC), quotes
Delivery & dispatch	"I can see every delivery live"	fulfilment, dispatch
Trade & supply	"Buying and selling to businesses without phone chaos"	quotes (RFQ), price lists, invoicing (B2B, e-invoice, e-way bill), ledger, procurement, recipes, trade-network
Health front desk	"Patients book and queue without calling five times"	bookings (provider / department), queue, workforce, documents (non-clinical forms), payments
Growth	"I spend on ads that bring orders"	marketing, loyalty
Community & giving	"Members, dues and donations tracked"	memberships (dues), donations, bookings (hall), workforce (volunteers)
Back office	"My books, cash and licences are under control"	expenses, ledger, compliance, documents, connectors, payroll (FUTURE)

Core/extended operational modules

Module	What expands
offerings-catalog	Offering kinds (Section 6.3), GTIN / HSN / SAC codes, units and conversions, variants, B2B price lists (P1; price lists P4)
orders	Channel field (web, WhatsApp, POS, phone, ChitBridge), dine-in / table orders, pre-orders with a date, returns and exchanges (P1-P2)
payments	Payment links, UPI dynamic QR, deposits, split tender, cash / card records, COD, refunds, Razorpay Subscriptions (P1-P2)
inventory	Batches and expiry (FEFO), weights, serials, stock counts, wastage, reorder points, location transfers, van stock (P1-P4)
fulfilment	Pickup, local delivery, shipping; hands local delivery to dispatch (P2)
bookings	Modes: appointment, table, stay, class, rental, site visit, event date; waitlist; recurring; reschedule policy (P2)
memberships	Plan kinds (Section 10): access, session pack, recurring delivery, service contract (AMC), fee plan, member dues; freeze, grace, autopay (P2)
workforce	Provider schedules, shifts, skills, assignment rules, commission rules (FUTURE) (P2)
customer-relationships	Unified timeline, tags, segments, consent flags, guardians, customer assets (vehicle, pet, AC unit, property) (P1-P5)
leads	Configurable stages, sources (web, WhatsApp, call, Meta lead ads), assignment, follow-up SLA (P2-P3)

Additional modules in the capability blueprint

Key	Module	What it does	Phase
invoicing	Invoices & GST	Tax invoice, bill of supply, credit / debit notes, FY number series per location, place-of-supply tax split, e-invoice IRN when required	P1
pos	Counter billing	Scan or search, cart, hold bill, split tender, returns, cash drawer shifts, offline queue	P1
ledger	Khata / credit book	Running balance per customer and supplier, credit limits, ageing, reminders, settlements	P1
messaging	WhatsApp & messages	Business inbox, templates, opt-ins, routing to human or AI, SMS / email fallback	P1
reviews	Reviews	Verified reviews, replies, reports, moderation, Google sync	P1
compliance	Licences & deadlines	Licence and filing calendar, expiry reminders, document vault link	P1
quotes	Quotes & proposals	Versioned quotes, RFQ replies, validity, online accept, PDF, convert to order / project / invoice	P2
dispatch	Live delivery	Delivery and field jobs, crew assignment, live location, ETA, proof of delivery, COD settlement	P2
queue	Walk-in queue	Tokens, live queue board, "your turn soon" WhatsApp	P2
tasks	Tasks & checklists	Housekeeping, maintenance, prep, opening / closing checklists	P2
attendance	Check-ins	Member, student and staff check-in by QR or manual; hardware adapters later	P2
kitchen	Kitchen display	Kitchen order tickets by station, bump screen, prep timers, printer fallback	P2
marketing	Campaigns & ads	Audiences, WhatsApp broadcasts, Meta ads, coupons, attribution	P3

Key	Module	What it does	Phase
loyalty	Loyalty & referrals	Points or stamps, rewards, referral codes	P3
ai-employees	AI staff	One entitlement per AI employee, limits, approvals, meters	P3
connectors	Integration hub	Adapters, credentials, source-of-truth settings, sync logs	P4
expenses	Expenses & cash book	Expenses, petty cash, daily cash closing	P4
procurement	Buying	Suppliers, price agreements, requisitions, POs, goods receipt, supplier bills, payables	P4
recipes	Recipes & BOM	Components per offering, yield, wastage, unit conversions, production batches, consumption on sale	P4
trade-network	ChitBridge link	Entity binding, buyer / supplier relations, chit sync	P4
projects	Projects	Stages, milestones, payment schedule, client approvals, file room; property projects and units	P5
jobs	Job cards	Request → inspect → estimate → approve → work → parts → QC → invoice, linked to a customer asset	P5
academics	Courses & batches	Courses, batches, timetable, enrolment, assessments, homework, certificates	P5
documents	Forms & files	Templates, intake and consent forms, uploads, typed / drawn signatures	P5
donations	Donations	Causes, one-off and recurring gifts, 80G receipts, donor timeline	P5
insights	Insights	Dashboards computed from real data only (Build Spec Section 9)	P1 → P5
payroll	Payroll	Salary runs from attendance and commissions	FUTURE
channel-manager	OTA sync	Room availability sync with travel sites	FUTURE
ticketing	Event tickets	Tickets for events (excluded now per Build Spec Section 3)	FUTURE

Important

This is a capability blueprint. Some modules are current, some are extensions and some are planned. A module should never be presented to a business as working until its data, API, permissions and real UI are complete.

05

Role-specific workspaces

The same Business OS must feel different to an owner, cashier, receptionist, driver, technician, teacher or accountant - because they have different jobs and different permissions.

Role	What they do	Scope	Surface	Home answers
Owner	Everything, approvals, billing, AI limits	Business	Workspace	Needs you now · Today · Your business (Build Spec Section 8)
Manager	Operations, approvals up to a limit, staff rota	Location	Workspace	What is late or stuck at my location?
Front desk	Bookings, queue, check-ins, customers, collect payments	Location	Workspace	Who is here, who is next, who owes?
Provider (doctor, stylist, trainer)	Own schedule, own appointments, booking notes	Assignment	Workspace or crew app	My next appointment and my day
Cashier	POS, orders, payments, returns under a limit,	Location	POS	Open shift, bills, drawer balance

Role	What they do	Scope	Surface	Home answers
	cash shift			
Kitchen	Tickets for their station; no prices or phone numbers	Location	Kitchen display	What to cook next
Store keeper	Stock, goods receipt, counts, transfers, draft requisitions	Location	Workspace	What is low, what arrived
Dispatcher	Dispatch board, assign crew, reassign failed jobs	Location	Workspace	Unassigned and late deliveries
Delivery partner	Assigned deliveries: name, address, amount, COD; phone only while the job is active	Assignment	Crew app	My next drop
Technician	Assigned job cards, parts used, photos, that asset's service history	Assignment	Crew app	My next job
Housekeeping	Assigned room and area tasks	Assignment	Crew app	Rooms to turn around
Sales executive	Assigned leads, quotes, site visits	Assignment	Workspace or crew app	Follow-ups due today
Teacher	Own batches: attendance, assessments, announcements	Assignment	Workspace or crew app	Today's classes
Accountant	Invoices, ledger, expenses, exports, connectors; no customer messaging	Business	Workspace	Unpaid, unsynced, due
Marketer	Campaigns and audiences as counts; no phone-number export	Business	Workspace	What is running and what it earned

Surface model

Surface	Device	Who	Status
Workspace	Desktop / tablet web	Owner, manager, office roles	EXISTS
Crew app (/crew)	Phone PWA, then native wrapper for background location	Delivery, technician, housekeeping, provider on the move	NEW P2
POS	Tablet or desktop, full screen	Cashier	NEW P1
Kitchen display	Kitchen tablet	Kitchen stations	NEW P2
My Activity	Customer phone / web	Customers	EXISTS
Guardian & student portal	Phone web	Parents, students	NEW P5
Supplier view	ChitBridge mailbox, or a magic-link PO page for off-network suppliers	Suppliers	NEW P4
Brand HQ	Desktop	Franchise brand owners	FUTURE

Security model

A role is not just a sidebar label. It is permissions + scope + default surface. Assignment-scoped workers should only see the records assigned to them. UI hiding is not the security boundary.

06

Automation and AI employees

LOCAH automates predictable business work deterministically, and uses AI only where language, judgement or drafting adds value.

Automation pattern

Trigger	Example action	Stops/changes when
Membership nearing expiry	Send reminder + payment link	Payment succeeds, member pauses, owner disables automation
Booking tomorrow	Send confirmation/reminder	Booking cancelled/rescheduled
Stock below threshold	Alert or draft purchase request	Stock restored or threshold changed
Invoice overdue	Send statement/payment link	Invoice paid or owner pauses
Order picked up	Send tracking update	Delivered/failed
Completed order/booking	Request review	Customer already reviewed or opted out
Lead follow-up due	Create task / nudge sales person	Lead moves stage or closes
Licence expiry approaching	Notify owner and create task	Renewal date updated

Every automation should be idempotent, visible in owner activity, auditable and switchable off. It should not secretly perform irreversible money movement or permissions changes.

AI employee roster

AI employee	Works in	May act within rules	Always asks owner
WhatsApp Manager	messaging, orders, bookings, leads	Answers FAQs, builds carts from the catalogue, books free slots, sends payment links at list price, gives order status	Discounts, custom prices, refunds, off-catalogue items
Receptionist (voice)	Phone, WhatsApp calls	Answers, books, reschedules, takes messages, sends confirmations	Anything medical, complaints, refunds; hands the call to a human
Appointment Manager	bookings, queue	Fills cancellations from the waitlist, reminders, no-show follow-ups	Overbooking, fee waivers
Collections Assistant	memberships, ledger, donations	Renewal and dues reminders on the owner's schedule, payment links	Waivers, extensions, credit-limit changes
Delivery Coordinator	dispatch	Suggests or auto-assigns within rules, sends ETA updates, reschedules failed drops	Paid third-party courier booking
Inventory Manager	inventory	Low-stock alerts, wastage anomaly flags, reorder suggestions	Every stock adjustment
Procurement Planner	recipes, procurement, trade-network	Drafts requisitions from demand and BOM	Sending any PO (auto-send only under an owner limit to an approved supplier)
Bookkeeper	expenses, procurement, connectors	Reads bill photos into drafts, matches payments, flags sync errors	Posting anything to books or Tally
Sales Executive	leads, quotes, bookings	Qualifies leads, schedules site visits, follow-up nudges, quote drafts	Sending a quote, any price change
Marketing Manager	marketing	Audience and campaign drafts, creative drafts, weekly results summary	Any spend, any broadcast
Review Responder	reviews	Reply drafts; auto-posts 4-5 star replies if the owner turns it on	Replies to 1-3 star reviews, reports
Website Editor	website	Rewrites a section's content fields (Build Spec Section 7)	Publishing

Autonomy tiers

Tier	Meaning	Examples
T0 Read	Look up, never change	Order status, slot availability
T1 Draft	Prepare; a human sends	Quotes, POs, bill entries, campaigns
T2 Act within limits	Do it, inside owner-set limits, logged	Book a free slot, send a list-price payment link, send a scheduled reminder
T3 Approval always	Owner taps Approve in "Needs you now"	Spend, refunds, discounts above limit, deletions, POs above limit

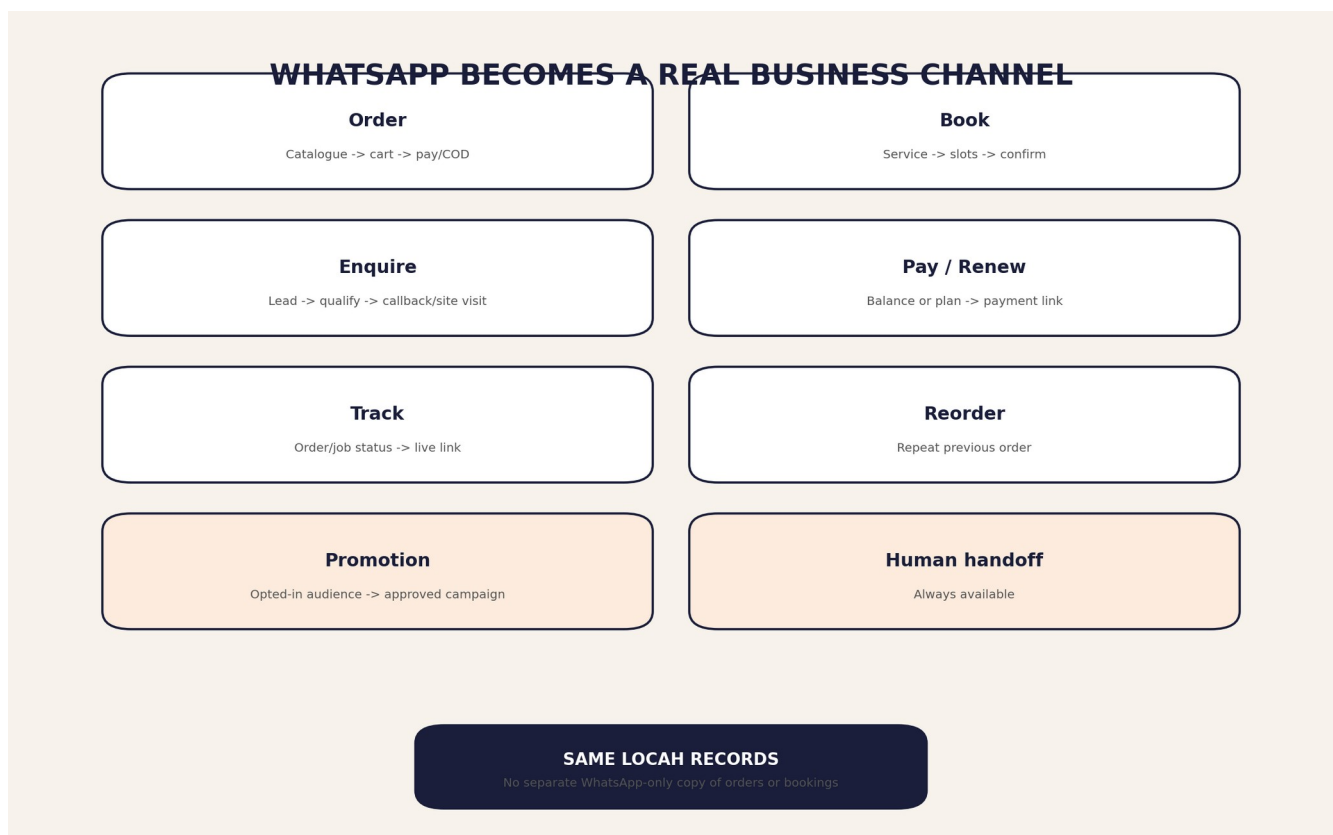

Rule for AI staff

AI employees are staff, not gods. They use explicit tools, permissions, limits and audit trails. Prompts cannot raise a discount limit, authorize a refund, change permissions or spend ad money.

07

WhatsApp: order, book, pay, promote, track

WhatsApp should become a real Business interface - not a separate chatbot with fake state.

Core customer journeys

Intent	Structured journey	Creates/updates
Order (restaurant, meat, grocery, bakery)	Menu → category → item → quantity / cut / weight Flow → cart summary → delivery or pickup → address pin → pay link or COD	orders + stock reservation + dispatch job
Book (salon, clinic, gym trial, table)	Service → date → slots → confirm	bookings
Enquire (real estate, B2B, education, services)	Lead-form Flow	leads + assignment
Pay / renew / dues	Template button → payment link	payments, memberships, ledger
Track	"Where's my order" → status + live tracking link	Tracking page (Section 13)
Reorder	"Repeat last order"	orders
Change / cancel	Within the owner's policy only	orders / bookings
Talk to a person	Button always visible	Workspace inbox

Promotions and broadcasts

- Owner chooses an eligible/opted-in audience rather than blasting every phone number.
- Campaigns use approved message templates and provider rules when required.
- The business can segment by real customer history: e.g. gym renewals, restaurant customers, previous buyers or leads - subject to consent.
- The owner approves the offer, audience, schedule and any spend before launch.
- Replies return to the same Business inbox. A customer can immediately move from a promotion into an order, booking, enquiry or human conversation.
- Frequency controls, opt-out/consent and audit are part of the design; LOCAH should not become an uncontrolled spam tool.

Example: WhatsApp order

Customer: "2 kg chicken curry cut and 1 kg mutton, deliver."

LOCAH identifies the catalogue items, asks only the missing choice if required, confirms delivery/pickup and address, presents payment/COD, creates the real order, reserves stock and creates the fulfilment/dispatch work. The order then appears in Workspace exactly like an order from the Website.

08

AI Receptionist

The receptionist is a voice/front-desk layer over real LOCAH tools: bookings, queue, leads, customer records and payments.

Business	Caller usually wants	AI Receptionist does	Human handoff
Clinic / hospital / dental	Appointment with a doctor or department, timings, directions, queue status	Books the provider slot, sends time + token + map on WhatsApp, reminder 2 h before	Symptoms, emergencies, reports, prescriptions, billing disputes

Business	Caller usually wants	AI Receptionist does	Human handoff
Hotel / homestay / resort	Room for dates, rate, check-in time	Checks date-range availability, quotes, holds the room, sends a deposit link; confirms on payment	Groups above the owner's room limit, complaints
Salon / spa	Service with a stylist	Books the provider slot, offers the next free alternative	Bridal packages (captured as a lead), pricing disputes
Restaurant / café	Table booking, opening hours, order status	Books the table; for phone orders sends a WhatsApp order link instead of taking a long order by voice	Catering and large parties (lead)
Real estate	Project details, site visit	Captures the lead, books a site visit with the assigned sales executive, sends brochure + map	Price negotiation
Education	Admissions, batch timings, fees	Answers from the course catalogue, books a demo class or counselling	Fee concessions
Home services / garage	Technician visit, job status	Creates the job request with address and slot	Complaints, warranty claims
Gym / studio	Timings, plans, trial	Books a trial, sends the plan link	Refunds, freezes beyond policy

Healthcare boundary

For clinics/hospitals the AI receptionist handles front-desk operations such as appointments, directions, queue and reminders. Symptoms, emergencies, prescriptions and medical advice must go to appropriate humans/clinical systems.

09

Memberships and subscriptions

One recurring-lifecycle system can serve gyms, salons, AMCs, tuition fees, milk/tiffin delivery and clubs without pretending they are the same business.

Plan kind	Examples	"Active" means	Renews by
access	Gym, yoga studio, co-working desk, club	Can check in until the end date	Month / quarter / year
session_pack	10 PT sessions, salon package, therapy pack	Sessions left > 0 and before expiry	Buying a new pack
recurring_delivery	Milk, tiffin, flowers, produce box	Deliveries are generated on schedule	Prepaid period or month-end bill
service_contract	AC / RO / pest-control AMC, IT retainer	Covered visits within the period	Contract year
fee_plan	Coaching term fees, school instalments	Enrolment stays active while instalments are paid	Instalment due dates
member_dues	Associations, clubs, trusts	Member in good standing	Annual dues

Renewal ladder example

When	What the member receives	System action
T-7 days	WhatsApp: "Your plan ends on 30 Sep. Renew now" + pay button	Create payment link for the next period
T-2 days	Same, with the amount and plan name	Link reused, not recreated

When	What the member receives	System action
T0	"Your plan ends today"	Autopay: attempt charge; failure falls back to the link
T+1	"You're in your grace period until \<date>"	Status → GRACE
End of grace	"Your membership has expired"	Status → EXPIRED; owner sees it in "Expired this week"
T+15	Win-back offer	Only with marketing opt-in, sent as a marketing template

A gym Workspace can show Active, Expiring soon, Grace, Expired and Paused members; a calendar shows plan start/end dates, renewals and freezes. A recurring flower delivery uses the same lifecycle infrastructure but its fulfilment semantics remain recurring product delivery, not fitness membership.

10

Delivery and dispatch

The delivery system connects owner dispatch, worker navigation and customer tracking while keeping each role in the right surface.

Owner / dispatcher	Delivery worker	Customer
Unassigned, assigned, picked up, in transit, delivered, failed; crew map; COD state	Only assigned jobs; customer/address/amount as needed; Open in Google Maps; call while job active; picked up/delivered/proof	Order tracking page; status stepper; ETA; live location where enabled; delivery proof/status

What live tracking actually means

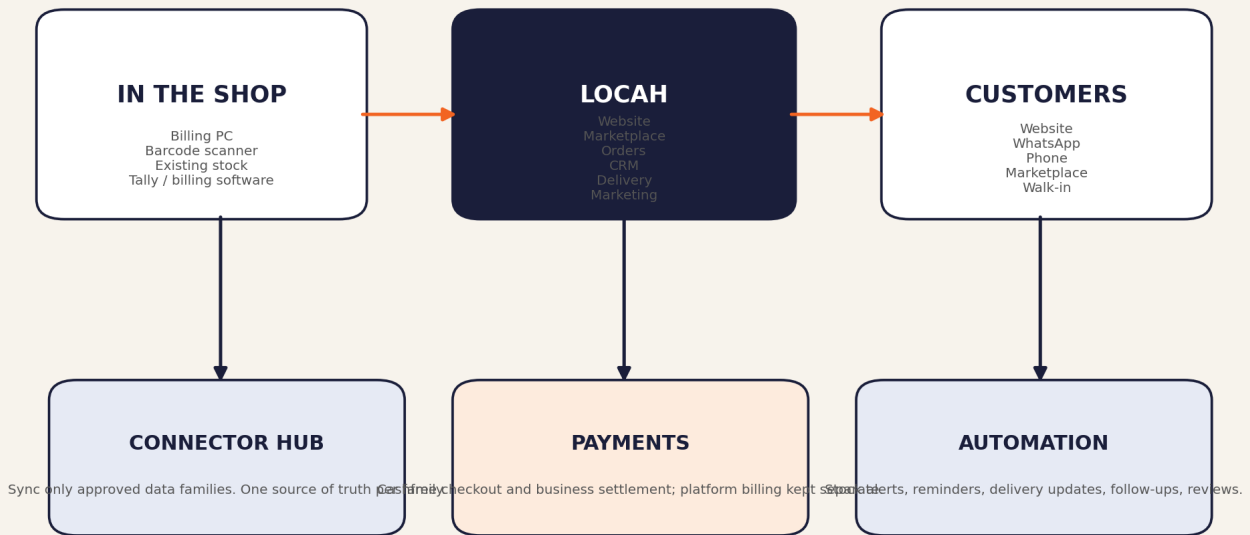

- The worker device shares location only with permission and only while appropriate/on duty.
- LOCAH stores/uses location pings for the active job and shows them to authorized owner/customer views.
- Google Maps can be opened for directions; routing/ETA can use a maps provider, but Google does not automatically track the driver for LOCAH.
- Failed deliveries, rescheduling, proof of delivery and COD settlement are explicit operational states.

11

Billing, POS, inventory and existing shop software

LOCAH should extend the business the owner already runs - not force them to recreate stock and billing from scratch.

A SMALL PHYSICAL SHOP BECOMES DIGITAL WITHOUT RE-ENTERING EVERYTHING

The physical shop and the digital business stay the same business.

POS and billing

- Scan/search item → cart → cash/UPI/card/external tender → invoice/receipt → stock movement.
- Support hold/retrieve bill, returns, discount permission limits, cash shifts and offline-safe operation.
- Barcode scanners can behave as keyboard input; phone camera scanning can be added where appropriate.
- GST/tax rules are deterministic configuration supplied/verified by the business and its accountant - never guessed by AI.

Inventory

- Products, variants, units, weights, batches/expiry, serials, counts, wastage, reorder points and transfers.
- Stock can be location-specific and can include van stock or other operational inventory.
- Online orders, POS sales and WhatsApp orders should converge on the same stock truth.

Tally and billing-software connectors

The design uses a source-of-truth contract per data family. For example, the shop can keep accounting/ledger in Tally while LOCAH owns online orders and digital customer journeys. Synchronization is explicit; there is no uncontrolled two-way free-for-all.

Data family	Possible owner of truth	LOCAH role
Catalogue	LOCAH or existing billing system	Publish online and map IDs
Inventory	Tally/billing system or LOCAH	Mirror/sync according to chosen ownership
Online orders	LOCAH	Send downstream as required

Data family	Possible owner of truth	LOCAH role
Accounting ledger	Tally/accounting system	Sync vouchers/status where supported
Customers/CRM	LOCAH	Use for Website/WhatsApp/operations with consent

12

Payments: current direction is Cashfree

Payment infrastructure is split into merchant money and LOCAH platform billing so business money and platform fees never become the same ledger.

Current decision update

The 24 Sep Business Capability Universe draft still names Razorpay in some places. The current product decision is to use Cashfree for LOCAH payment flows. Treat older provider references as historical.

Flow	What happens
Customer → Business	Customer pays through Cashfree checkout. Where supported for the marketplace model, settlement/split logic routes the business share and LOCAH platform fee according to configured commercial rules.
Business owner → LOCAH	Monthly/PAYG/platform purchases are separate Cashfree platform-billing transactions paid to LOCAH.
Refunds	Created from authorized LOCAH workflow and reconciled to the originating payment/resource.
Membership/payment links	Used for renewals, deposits, invoices or other approved business flows; provider capability must be verified before promising recurring behavior.

Checkout is a LOCAH-designed order/booking summary followed by the secure Cashfree payment experience. Browser callbacks are never payment truth; backend/provider verification and webhooks determine final payment state.

13

Growth: reviews, campaigns, Meta and local presence

Growth features should be connected to real orders, bookings and leads so the owner can see what actually worked.

Reviews

- Verified reviews can be tied to completed interactions where possible.
- Business can reply, report a violation and choose featured reviews on its own Website.
- A legitimate negative Marketplace review is not silently deleted by the business owner; violation reports go through moderation.

- Review requests can be automated after eligible completed activity.

Marketing and Meta

- Create audience → offer → creative → budget/schedule → owner approval → launch → measure.
- AI Marketing Manager may draft campaigns and summarize results; it does not spend money without explicit authorization.
- Attribution should connect campaign → lead/order/booking → revenue where technically possible.
- WhatsApp promotions use consent and provider rules; local presence can later synchronize approved business information with external profiles where supported.

14

Real estate

Real estate is project-, lead- and quote-driven, not ordinary ecommerce.

Area	What LOCAH should support
Projects	Upcoming, launching/live, sold out/completed/on hold; image galleries, video, floor plans, brochure, amenities, unit types
Lead flow	Enquiry → salesperson assignment → site visit → follow-up → quote → negotiation → won/lost
Quotation	Versioned quote with components, discount/approval, payment plan, validity, PDF/WhatsApp share, acceptance
Customer action	Explore projects, enquire, request information, book site visit - depending on business setup
Workspace	Project inventory, leads, site visits, quote status, media uploads, assigned sales work

15

Education

Education needs courses/batches, enrolment, attendance, fees and role-specific views - while keeping student/guardian information scoped correctly.

Surface	What it contains
Owner/office	Courses, batches, admissions, fee plans, enrolment, schedules, announcements
Teacher	Today's classes, attendance, assessments/homework, announcements for assigned batches
Student/guardian	Timetable, attendance, fees, payments, assignments/results where enabled, announcements
Website/WhatsApp	Course discovery, admission/demo enquiry, booking/counselling, fee reminders and approved communication
Automation	Fee due/renewal reminders, class reminders, attendance follow-up where appropriate

Safeguarding

Where minors are involved, consent, visibility and communications need stricter policy. The Business OS can manage operational records without becoming a general surveillance system.

16

B2B, manufacturing and supply

LOCAH also serves businesses that do not use consumer carts at all.

Business model	Typical LOCAH flow
Industrial supplier	Technical catalogue → RFQ → quote → customer-specific terms → PO → dispatch → invoice → receivables
Manufacturer	Distributor order → BOM/material requirement → procurement → production/lot/QC → dispatch → B2B invoice
OEM/engineering	Enquiry → site survey → technical/commercial proposal → PO → project milestones → commissioning → AMC/spares
Wholesale/distribution	Retailer-specific prices → salesman/WhatsApp order → credit/collections → van/route delivery → returns/expiry claims
Import/export	Enquiry → proforma → documents → shipment milestones → payment terms
Agriculture	Harvest/availability → pre-order/bulk quote → delivery; produce subscriptions and farm visits where relevant

The B2B network design uses supplier/buyer relationships and connector rails rather than sharing one tenant database. Each business keeps its own records and only approved cross-business obligations are exchanged.

17

All selectable business categories

The category picker covers 32 practical business families plus Other/Not sure. Subcategories are searchable and category is only a recommendation seed.

Category	Examples / subcategories	Default capability packs

21.10 Industrial, manufacturing, trade, agriculture, printing and packaging

Business family	What LOCAH runs	Core / recommended modules	People / AI
Industrial suppliers: pumps, valves, motors, bearings, instrumentation, chemicals, lab	Technical catalogue with specs and datasheets, industries served, RFQ → quote with MOQ and lead time, customer price lists, credit terms, PO → sales order → dispatch → invoice →	Core: offerings (specs, datasheets), quotes (RFQ), orders, invoicing (B2B), ledger · Rec: trade-network, dispatch, leads, marketing,	Sales engineers, accounts, dispatch · Sales Executive,

Business family	What LOCAH runs	Core / recommended modules	People / AI
and safety equipment, panels, automation, machine tools	receivables, repeat-order portal	connectors	Bookkeeper
Manufacturers: food, textiles, garments, plastics, chemicals, pharma, auto components, machinery, furniture, metal fabrication	Orders from distributors, BOM and production batches (material requirement from orders), raw-material purchasing, lot tracking, QC checklists, certificates of analysis, dispatch, job-work challans	Core: recipes (BOM), procurement, inventory (lots), orders, invoicing (B2B), quotes · Rec: trade-network, tasks (QC), documents, connectors	Production supervisor, store keeper, QC · Procurement Planner, Inventory Manager
OEM and engineering firms: process equipment, boilers, compressors, water treatment, conveyors, automation	Enquiry → site survey → technical + commercial proposal → PO → project (design, fabrication, install, commissioning) → AMC and spares on an installed-base register	Core: leads, quotes, projects, payments (milestones), jobs (service), memberships (AMC) · Rec: procurement, documents, trade-network	Application and service engineers (crew app) · Sales Executive
Packaging (boxes, labels, bottles, flexible, food packaging) and printing / signage (press, digital, flex, engraving, laser cutting)	Spec-based quotes with quantity breaks, artwork approval, job tickets through production stages, one-tap repeat orders, B2B credit; walk-in print jobs at a counter	Core: quotes, orders (job stages), documents (artwork approvals), invoicing, ledger · Rec: recipes (material per job), procurement, pos	Estimators, operators · Sales Executive
Wholesale and distribution: FMCG, pharma, food, electrical, building material, industrial	Retailer ordering on WhatsApp with retailer-specific prices, salesman beat plans with order-taking in the crew app, credit limits and collections, van sales, schemes (buy 10 get 1), delivery runs, expiry and return claims	Core: orders (B2B), price lists, ledger, dispatch, inventory (batches), invoicing · Rec: trade-network, pos (van sales), marketing (schemes), connectors	Salesmen (crew app), delivery, accounts · WhatsApp Manager (retailer reorders), Collections Assistant, Procurement Planner
Import / export, trading companies	Overseas enquiries, proforma invoices in foreign currency, Incoterms, shipment milestones, export documents (packing list, certificate of origin), payment terms	Core: quotes (proforma), orders, documents, invoicing (foreign currency), ledger · Rec: trade-network, procurement	Export executive · Sales Executive
Farms: organic, dairy, poultry, fish, mushroom, hydroponics, nurseries	Produce-box subscriptions, farm-gate orders, farm visits; harvest availability lists and pre-orders for restaurants and wholesalers; daily output and feed-stock logs; nursery catalogue + landscaping enquiries	Core: offerings, orders, memberships (produce boxes), inventory (harvest lots) · Rec: trade-network, quotes (bulk), bookings (visits), dispatch	Farm manager, delivery · Procurement Planner (feed, seed)
Agri services: tractor rental, irrigation, farm consultancy, seed, fertiliser and equipment dealers	Rental with operator by hour or acre, dealer counter with seasonal credit repaid at harvest, consultancy bookings	Core: bookings (rental + operator), pos, ledger (seasonal credit), inventory · Rec: dispatch, memberships	Operators (crew app) · Collections Assistant

21.11 Clubs, religious and cultural bodies, NGOs

Business family	What LOCAH runs	Core / recommended modules	People / AI
Clubs, sports and hobby clubs, associations, chambers, member networks	Opt-in member directory, annual dues, facility booking (courts, rooms), events with RSVPs and capacity, committee announcements	Core: memberships (member_dues), bookings (facilities, events), messaging, payments · Rec: documents, workforce (volunteers)	Secretary, treasurer · Collections Assistant
Temple service organisations, cultural centres, trusts, community halls	Donations, dated seva / pooja bookings, hall bookings, sponsorships (e.g. annadhanam), festival schedules, receipts	Core: donations, bookings (seva, hall), payments, messaging · Rec: memberships, documents	Office staff, volunteers · Receptionist
NGOs, animal rescue, education NGOs, charities, social enterprises	Causes and campaigns, one-off and recurring donations, 80G receipts, donor timeline and updates, volunteer rosters, donor / CSR reports, product sales for social enterprises	Core: donations, customer-relationships (donors), payments, messaging · Rec: workforce (volunteers), documents, marketing, orders	Coordinators, volunteers · Collections Assistant, Marketing Manager

19

End-to-end examples

These examples show how the same platform becomes a very different operating system for each business.

Meat shop

Interview learns weight/cuts, delivery/pickup and order model. Website shows products/cuts. WhatsApp can build the cart. Orders hit Workspace, stock is reserved, Cashfree/COD handles payment, dispatch tracks local delivery, POS serves walk-ins, Tally/billing connector can keep shop stock/accounting aligned.

Gym

Website explains programmes and memberships. Memberships track start/end, active/grace/expired/paused. Classes/PT use bookings. Attendance records check-ins. Renewal automation sends reminders/payment links. Staff see their own schedule; owner sees renewals, attendance and collections.

Clinic / hospital

Website exposes services/departments/providers. Customer books online or through WhatsApp/AI Receptionist. Front desk sees arrivals/queue/collections. Providers see their schedule. Reminders reduce no-shows. Medical advice stays outside the receptionist role.

Hotel / homestay

Website shows room types and date-range availability. Customer requests/books room and pays deposit if configured. AI Receptionist can check dates and send a deposit link. Front desk manages reservations; housekeeping receives room turnaround tasks.

Tuition / academy

Website explains courses/batches. Admissions/demo enquiry becomes a lead/booking. Students enrol into batches and fee plans. Teacher workspace shows classes and attendance. Guardian/student portal can show timetable, fees, assignments/results when enabled.

Real estate

Website and Marketplace show project imagery/status. Enquiries become leads, salespeople get assignments and site visits, quote builder sends a versioned proposal, projects keep milestones and customer files.

Industrial supplier

Website becomes a technical catalogue. Buyers request RFQs rather than use a consumer cart. Sales prepares quotes, credit/ledger and B2B invoices. Repeat customers can use price lists. Tally and supplier network connectors handle downstream finance/supply integration.

Small retail shop already using billing software

The shop keeps its existing counter and accounting workflow where appropriate. LOCAH brings the same catalogue/stock online through a controlled connector, adds Website, Marketplace, WhatsApp orders, online checkout, CRM, reviews, delivery and marketing - without forcing duplicate manual entry.

Build and test philosophy

The system is intentionally designed so most product testing costs almost nothing in AI credits.

Test layer	What it verifies	Paid model calls
Deterministic fixtures	Category → traits → module recommendations, tax/stock maths, renewal schedules	0
Service integration	Module state, tenant isolation, permissions, idempotency	0
Provider replay	Recorded WhatsApp/payment/Tally/Meta payloads and webhook behavior	0
AI record/replay	Agent behavior using stored outputs	0
Interview-only evaluation	Question quality, redundancy, readiness and Blueprint coverage without Website/image generation	0 in routine tests
Live smoke	A tiny representative set only after deterministic tests pass	Capped / explicit

Interview quality rule

The objective is not "fewer questions at any cost". It is more understanding per owner effort. Simple businesses should normally reach readiness after a small number of high-information follow-ups; complex businesses may need more. A 15-20 question interrogation is treated as a UX failure unless the owner explicitly chooses to keep refining.

What LOCAH deliberately avoids

- Separate vertical apps for each business category.
- AI-generated fake business facts, fake reviews, fake stock, fake availability or unsupported claims.
- Letting AI decide tax, money movement, permissions or irreversible approvals.
- Duplicating orders/bookings/stock separately in Website, WhatsApp and Workspace.
- Forcing a business to replace every existing system; connectors are used when another system should remain source of truth.
- Testing hundreds of businesses with real paid AI calls when deterministic fixtures can validate the architecture.

THE PRODUCT IN ONE SENTENCE

What LOCAH is designed to become

LOCAH

Tell LOCAH about the business. It creates the digital presence, recommends the right operating tools, connects the channels the business already uses, and gives owners, workers, customers and AI assistants one shared operating system.

For a small shop, that means the Website, Marketplace, WhatsApp, billing counter, inventory, payments, delivery, customers and promotions can finally refer to the same business. For a clinic, hotel, gym, school, real-estate developer or industrial supplier, the same platform reshapes itself around the way that business actually works.
